

LinkedIn Profile Update Draft

Here is a tailored draft for your LinkedIn profile based on your 2 years of work on the **Central and State Education Portal (Ministry of Education)**.

I have focused on your technical achievements with Python, Selenium, and Pytest, while explicitly **excluding CI/CD** as requested.

Headline

QA Automation Engineer | Python & Selenium Expert | Building Robust Test Frameworks for GovTech Platforms

Experience Section

Role: Automation Test Engineer

Project: Central and State Education Portal (Ministry of Education)

Duration: [Start Date] – Present (2 Years)

Description:

Spearheaded the end-to-end test automation for a critical government education portal serving thousands of teachers and students. Designed and maintained a robust scalable Hybrid Automation Framework using **Python** and **Selenium WebDriver** to ensure high availability and defect-free releases.

Key Responsibilities & Achievements:

- **Framework Development:** Built a maintainable **Page Object Model (POM)** framework from scratch, reducing script maintenance time by **40%** and ensuring clean separation between test logic and page interactions.
- **Complex Workflow Automation:** Successfully automated complex user journeys including **Teacher Registration, Multi-stage Form Submissions, and Document Uploads**, handling dynamic elements and custom dropdowns (Chosen.js) with high reliability.
- **Payment Gateway Testing:** Engineered stable solutions for automating **SabPaisa Payment Gateway** interactions, implementing smart logic to handle iframes and secure transactions, significantly reducing manual testing effort for financial modules.

- **Data-Driven Strategies:** Implemented dynamic test data generation (using **Faker** and custom utilities) to simulate real-world scenarios, ensuring unique user datasets for every execution cycle and preventing data collision.
- **Stability & Optimization:** Replaced hard-coded sleeps with **Dynamic Smart Waits (WebDriverWait)**, improving test execution speed by **30%** and reducing flakiness across environments.
- **Reporting & Debugging:** Integrated **Pytest-HTML** reporting to provide detailed execution insights, enabling faster root cause analysis for development teams.
- **Human-in-the-Loop Testing:** Developed unique solutions to handle security checkpoints like **OTP and CAPTCHA** by integrating manual intervention steps within the automated suite, ensuring 100% test coverage of secured flows.

Tech Stack: Python, Selenium WebDriver, Pytest, Git, VS Code, HTML/CSS (DOM Analysis).

Skills Section to Add/Update

- **Automation:** Selenium WebDriver, Page Object Model (POM), Data-Driven Testing, Keyword-Driven Testing.
 - **Languages:** Python (Scripting, OOP).
 - **Testing Tools:** Pytest, Unittest.
 - **Domain:** EdTech, Government Portals, Payment Systems.
-
